FIRE SYSTEMSAt Grainger Fire & Security we offer a full range of fire detection systems:-• Conventional systems• Conventional 2 wire system• Analogue addressable open protocol• Analogue addressable managed protocol• Wire free radio systems• Gas suppression systems• Aspiration systems• Combination hybrid systems (radio & hard wire)• Ancillary systems such as access control• Instrinsically safe systems.We have the solution for our clients requirements, ensuring freedom of choice and value for money. SERVICESHere is an overview of the services and support offered by Grainger Fire & Security.Design: We provide a fully comprehensive design service for all our systems, carried out by our highly experienced System Design Engineers. They design cost effective systems, whilst not compromising on quality

or technology.Installation: Our installation teams are equipped and trained to the highest of standards, meeting the needs for compliance to BS5839:2002 & LPS1014, as recognised by the insurance industry.Commission: Our dedicated team of commissioning engineers have a wealth of knowledge and support from our senior technical team.Maintenance: Our service engineers are trained and conversant with all aspects of BS5839. With over 30 years of experience Grainger Fire & Security provide unique maintenance contracts, meeting our client's needs for cover during normal working hours or by offering a 24 hour call out service, which is available 365 days a year to both contract and non contract customers.Training: Our training consultants are fully qualified to provide a fully comprehensive fire safety training course held at your premises, allowing your company to comply with RRO 2005 (Regulatory Reform Order). This enables employers and responsible persons to meet the current and insurers requirements. The course covers the following areas:• Identifying fire risks and understanding the ignition process• Fire prevention in the work place• What to do on discovering a fire• Means of escape• Implementing a fire evacuation route• Evacuation procedures• Use of fire fighting equipmentBy providing awareness through carrying out risk assessments our clients are taking the first steps towards the prevention of potential hazards.
