Cona Limited Home of the Original All-Glass Coffee Maker

Cona Ltd. makes coffee making equipment for the home and for the catering industry.

We also manufacture a range of stainless steel catering equipment. Our Cona range consists of coffee makers, toasters, grills and water boiler boilers. Our Burshaw range comprises a range of manual fill and automatic water boilers, insulated urns and water boiler boilers as well as teapots, cutlery boxes and drip trays. We also have a range of Stawell water boilers. All of our catering equipment is factory manufactured in the UK using high quality stainless steel and components designed to give the user reliability and durability. Based on the vacuum principle, which is recognised by coffee specialists as the best method for infusing the perfect coffee, this method ensures that infusion takes place at the correct temperature and the glass vessels prevent any contamination of the coffee by any materials that could taint the flavour. Cona coffee makers have been sold in most countries throughout the world for more than 60 years. Cona 'Deluxe' Kitchen Model Designed for use on electric or solid fuel cookers, with no metal parts to taint the flavour of the coffee. Coffee is automatically infused at the correct temperature using the same vacuum method as our table models. Catering Our Cona catering product range consists of coffee makers, stainless steel toasters, grills and boilers. The coffee

maker range consists of 'Pour On' and 'Pour-N-Store' models and all have a simple to use filter system, precision thermostat for perfect coffee, and low consumption self-adjusting hotplates. The toaster range consists of stainless steel rotary and conveyor style toasters delivery mechanism; both have adjustable temperate control, are installed with Incoloy® Heating Elements, and can deliver 300 to 500 slices per hour, dependant on the model. The stainless steel grill is installed with Incoloy® Heating Elements and has a adjustable temperate control. The compact water boiler range consists of three stainless steel water boiler models, Automatic fill and Manual fill with sight glass, and without sight glass. The design has a double wall so they are cool to the touch and has a capacity of 8 litres.

Burshaw Products Our Burshaw catering product range consists of stainless steel boilers, stainless steel insulated urns and boilers, teapots, cutlery boxes and drip trays. The boiler range consists of 'manual', 'semi-automatic' and 'automatic' fill models that can hold between 10 to 55 litres dependant on the range and model, and are all made of high quality 304 stainless steel. They are all fitted with a thermostatic control, non-drip tap and safety cut-out with the 'manual' and 'semi-automatic' models having a manual reset. The standard models operate at 230V-250V but are also available to operate at 110V or 3 phase. The Insulated urn range consists of 'manual' fill models that can hold between 15 to 25 litres and are all made of high quality 304 stainless steel. They can store cold or hot beverages and are fitted with a non-drip tap. The Insulated boiler range consists of 'manual' fill models that can hold between 20 to 30 litres and are all made of high quality 304 stainless steel. They are all constructed of a double wall so they are cool to the touch and fitted with a thermostatic control, safety cut-out with manual reset and a non-drip tap. The standard models operate at 230V-250V but are also available to operate at 110V or 3 phase. The range of teapots consists of models that can hold between 2.2 to 4.4 litres and are all fitted with a 'supastrain' filter and made of high quality 304 stainless steel. The cutlery boxes range consists of models that can have of 4 to 5 compartments and made of high quality 304 stainless steel. The drip tray range are made of high quality 304 stainless steel.

Stawell Products Our Stawell catering

product range consists of stainless steel boilers. The boiler range consists of 'manual' fill models that can hold between 15 to 25 litres. The standard models operate at 230V-250V but are also available to operate at 110V. All Stawell Boilers are made of high quality 304 stainless steel and are fitted with an energy regulator with safety cutout and with a non-drip tap. For more information please contact:
