Gretsch-Unitas Ltd, West MidlandsAfter more than 100 years of success, Gretsch--Unitas is one of the leading suppliers of window and door technology, automatic entrance systems and building management systems. Here you will not only find an unrivalled selection of products ranging from window hardware for single-family homes through to complex building management systems – this is also the right place if you need a system supplier for timber elements or CE certification. Project consultation for architects, planners, builders, and general contractorsFor more than a century, we have been involved with products and technologies, which most people have contact with quite naturally in everyday life, without being aware of their complex importance. In our capacity as developer and manufacturer, we offer system solutions for the opening and moving, closing and locking of windows and doors, as well as for the functional and secure management of buildings. Our project consulting services for youOn request, we develop with you an individual facilities master plan that comprises everything from determining all necessary functions right through to delivery to your customer. We also consider cross-functional interfaces between different trades.Of course, we prepare for you project-specific drawings, door lists, tenders and, if necessary, cable routing plans. If contradicting requirements arise, we support you in finding the optimal solution. Where necessary, we will develop tailor-made solutions or special constructions to fulfil the

individual requirements of your project.  Benefits for you daily workWe not only provide information on innovative products but also on relevant standards and directives and their immediate consequence for contractors during the planning and building phase. Furthermore, we offer a wide range of seminars which can be held either at our premises or at yours.Since builders prefer to convince themselves of the functions and the quality of technical solutions on the building directly, we organise and support complete on-site samplings and also present different system variants and functions, if requested. Another way to experience our products and systems 'in real life' is to visit our reference projects worldwide. Our contacts are at your disposal – in 35 countries. Window technologyAt GU you get everything you need to move or secure windows and balcony-doors. For any window opening method, regardless of the frame material. You will also find all relevant accessories and, as a matter of course, our tried and trusted services. Door technologyIn order to provide for comfortable and secure door functions, the GU group offers everything to ensure the smooth and trouble-free interplay between functional components: a broad selection of products, technical innovations, excellent quality and comprehensive services. This naturally includes expert advice – just call if you face a difficult task, you can always count on our support. Automatic entrance systemsWelcome to our comprehensive range of automatic doors and all-glass sliding walls suitable for almost any field of application. Whichever system you choose, we support you with our well-known all-round service ranging from project-specific drawings, installation and commissioning through to an extensive after-sales network. Building management systemsWith a building management system you can reasonably and efficiently interlink different security, communication and media technology systems and installations. Manufacturer-neutral building management systems allow you to integrate a multitude of systems, so you can offer your customers a high degree of flexibility, investment protection and freedom of decision. Some of the Services we Offer Include:Architectural Ironmongers West Midlands • Multi Point Locks West Midlands • GU Door Locks West Midlands • Mortice Lock West Midlands • Window Motors West Midlands • Door Closers West

Midlands
